

13200C/23200C Accelerometer

Rugged ± 10 g to ± 70 g
Superior Zero g Bias Stability

Analog Accelerometers

The Measurement-Specialties 13200C (uniaxial) and 23200C (biaxial) analog accelerometers are capable of accurately measuring ± 10 g, ± 15 g, ± 20 g, ± 25 g, ± 30 g, ± 35 g, ± 40 g, ± 50 g, or ± 70 g accelerations on one or two axes. A tough, compact housing holds potted electronics and the small size and built-in power regulation allow the 13200C and 23200C to fit where other accelerometers can't. Choose the bandwidth and range options best suited for your application.

The voltage output of the 13200C and 23200C is directly proportional to the acceleration along the axis. Each DC-coupled output is fully scaled, referenced, and temperature compensated. Users are supplied with a calibration certificate listing sensitivity and offset for each sensor, as well as the on-axis and transverse alignment parameters needed to ensure rapid and efficient system implementation. Increased offset compensation can be obtained with Option C002

Tested over the -40°C to $+85^{\circ}\text{C}$ temperature range, the accelerometers have a nominal full scale output swing of ± 2 Volts. The zero g output level is nominally $+2.5$ Volts. Precise values are available on the included calibration certificate. Custom versions of the 13200C and 23200C can be provided.
